Lecture

# App Intent Conflicts

- Occurs when a user is assigned to two groups with conflicting app install policies.
- Creating assignment conflicts can cause unpredictable results and is not recommended.
- Intune attempts to use priority and merge logic to determine the result of an intent conflict.

# Example Conflict Results

Group 1	Group 2	Result
User Required	User Available	Required and Available
User Required	User Uninstall	Required
User Required	Device Required	Required
User Uninstall	Device Required	Required
